

Management Center 3.3.5.2 contains the following fixes and updates:

SWGMGT-9599 - External auth logins fail

Functionality updates:

SWGMGT-8721 - Support for fractional timezones in reports

SWGMGT-8714 - Enhanced password controls

SWGMGT-9069 - Support for Reporter Enterprise Licensing in RPT 11.0.2

Fixes:

SWGMGT-9394 - Certificate warning when installing or opening UI packages

SWGMGT-9359 - Permissions error does not include details

SWGMGT-9322 - Collect Certificates job on large amount of devices can hang

SWGMGT-9272 - Some ZTP payloads are created with empty name

SWGMGT-9222 - DNS entries can revert to DHCP when deployed in GCP

SWGMGT-9213 - Full log details report not loading after upgrade to MC 3.3.4.1

SWGMGT-9202 - Proxy devices running on SSP hardware may not start up after issuing restart command

SWGMGT-9193 - Configuring failover with an empty "security allowed-hosts" list may fail

SWGMGT-9177 - The system displayed duplicate entries after 1000 rows, when exporting full log details. The CSV report export limit was updated to 50,000 rows. Reporter must be running 11.0.2 to use this fix.

SWGMGT-9173 - First time install of exception page can fail

SWGMGT-9153 - Default admin account can be temporarily deleted

SWGMGT-9146 - Some scripts can trigger false warning about affecting an ISG host

SWGMGT-9126 - Device Inventory widget automatically closing

SWGMGT-9111 - Name not populating when creating shared exception page object

SWGMGT-9108 - Users with read permissions unable to view VPM objects and backup images

SWGMGT-9082 - Device status API does not return last boot data for ISG devices

SWGMGT-8634 - DNS entries can revert to DHCP when deployed in AWS

SWGMGT-8510 - Running a policy trace from MC can remove existing forward policy in SG
